

Hints for having a successful online tutoring session using iCollaborate

1. Set your browser to full screen mode while in a conference. In most browsers pressing F11 will activate the full screen mode. In Chrome however, you will need to click the settings button and then the full screen icon.
2. If you conference often, especially from a home or office setting, we recommend purchasing a higher-end webcam such as the Logitech BCC950.
3. Prepare for your conference. Upload presentations or documents prior to the start of the meeting.
4. Test your hardware prior to entering a video conference using the test settings option.
